

Employment Connector™

Technology that provides the most complete and up to date way to verify and monitor an applicant's work history and ability to repay.

The Employment Connector service provides access to the majority of the US workforce. Businesses now have access to employment data and accounts previously inaccessible by traditional solutions. The Employment Connector service provides real-time employment and income data from customers across the W-2 and W-9 statuses, straight from the source, to help you reduce risk and make better, informed decisions. This solution empowers customers to control their data sharing to verify identity, employment, income, work history, schedule, average pay per cycle, and much more valuable KYC information.

Coverage

Additional Features
